

Grant Management Tracker

Grant Management Tracker

Grant Management for charitable and funding organisations

Grant Management Tracker assists charitable and funding organisations, manage, track and process grant applications and invoices efficiently. As a sophisticated, powerful and easy-to-use browser-based application, Grant Management Tracker can be rapidly deployed to both internal and external participants

Grant Management Tracker has been designed to process large numbers of grant applications, streamlining processes, improving accuracy and is easy to learn and use.

Our long track record includes both workflow systems and high quality Internet sites and web applications. This experience is essential for online applications systems which must work for applicants regardless of how they use the internet

Grant Management

Grant Management Tracker manages the full life cycle of Grant Administration, from initial application through evaluation, approval and ongoing management. Grant Management Tracker improves the efficiency of the grant management process, and provides the complete set of information required in one integrated database. Automated updates are generated for appropriate personnel, documents are generated and processed, and online reports provide immediate access to management information.

Workflow tracking

Grant Management Tracker employs a flexible workflow engine, which is initially set up to cover the main processes of Grant Management, as follows;

- Applications – Online applications and standard pro-forma Application Form receive the application data into the system, rather than requiring transcription.
- Approval – the system manages the tracking of the approval process via key personnel identified by User Roles.
- Maintenance – following successful approval, the ongoing management of the Grant is monitored by the system, providing complete record of payments made against cost forecast for the projected lifetime of the grant.
- Audit – All actions are audited by the system providing a complete record for audit purposes.

Document Generation / Processing

Following submission of the completed form by the Grantee, the system will automatically process the data and generate a Grant Application entry in the system. This process will save significant amounts of time in the production of documents and transcription of data, increasing business effectiveness and data accuracy.

Automated Notification

When a due date is approaching or has been exceeded, reports and visual indicators automatically alert the Manager that action is necessary.

Grant Management Tracker Origins

Grant Management Tracker has been designed to dramatically improve upon older grant management software packages and systems.

The first implementation of Grant Management Tracker was in March 2006 for the Association of International Cancer Research based in St. Andrews Scotland. The product is now being rolled out to other organisations across the UK.

Benefits / key features

- Improved workflow, utilising automatic routing and notification to progress grant applications
- Improved data accuracy, (no need for transcription with automated transfer of data)
- Improve efficiency by supplying up-to-the-minute grant information and status
- Interaction with key stakeholders, scientists
- Reduction in Staff workload
- Improved regulatory reporting to government organisations
- Budget forecasts provided to allow Executive Management to manage funds effectively
- Fully audited accountability by provision of transaction history and audit trail
- Web-based, providing remote access

Budget Management

Grant Management Tracker provides comprehensive budget management facilities, including cost forecasts (using agreed rate schedules) and payment tracking, again assisting administration by automating processes where appropriate.

Additionally, Academic Pay Scales are recorded in the system, incremented per annum over the lifetime of a project.

Web Access

Grant Management Tracker is a web-based application, allowing secure access from remote locations. There is no need to load software onto individual PCs; simply granting the necessary access rights to a user will enable them to instantly access the system.

Grant Management Tracker is built using modern industry standard Microsoft Software.

Grant Management Tracker can be deployed on Intranets and externally via the internet.

Reporting

Grant Management Tracker provides online reporting capability, giving instant access to real-time data. This ensures that management are kept fully informed of the current business environment.

Proven Secure Technology and High Performance

CC Tracker is designed for secure, high performance operation as a Microsoft® .NET application. The web-based interface is usable across different browser types and versions, and is compliant with the W3C Web Accessibility Initiative guidelines.

Grant Management Tracker Product Suite

Grant Management Tracker is linked to a suite of integrated products available in CC Tracker; CC Technology's core product suite. As features are added to CC Tracker, where appropriate these will be incorporated into Grant Management Tracker, providing customers with enhanced functionality.

CC Technology provide innovative IT solutions and consultancy to meet the needs of changing business practices. Technical excellence and business understanding form the basis of solutions provided to a client base including FTSE100 companies and enterprising SMEs since 1988 .
